AZ CORP COMMISSION
DOCKET CONTROL

Re AZCC docket # 00000C-11-0~~2~~328

Dear Commissioners,

Given the Arizona Corporation Commission's effort to understand and consider the guidelines surrounding the use of digital (smart) meter technology (AZCC docket #00000C-11-02328), I doubt the "public" utilities' have been forthcoming about the true extent of their knowledge surrounding this type of meters veiled, secretive use as a surveillance tool.

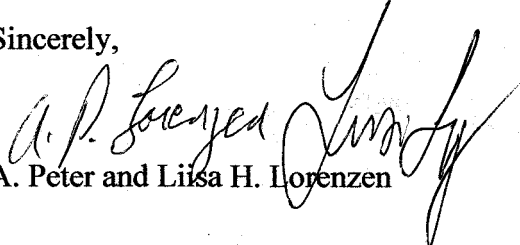

The widespread installation and use of digital (Smart?) meters offer many things, but the most outrageous is the surveillance tool law enforcement agencies will have. Any home that has a digital (SMART?) meter will allow the entire homes' wiring to emit milliamp "vibrations". Much like a bat's echo location, these high frequency emissions can be "picked-up" by airborne and land based receivers - literally allowing for remote viewing in to any structure.

When this technology is coupled with drones, law enforcement (drones' biggest buyers) will have a low cost surveillance that will allow for secret listening, voice recording, and include the ultra-Orwellian ability to "see" through walls using the high frequency oscillations ... just like those emitted from routers.

(<http://www.popsi.com/technology/article/2012-07/seeing-through-walls-wireless-router>)

We are quite certain **SERIOUS PRIVACY VIOLATIONS HAVE, AND ARE OCCURRING**, and though we are unable to offer anything more detailed, aside from this note, we want the Arizona Corporation Commission to be made aware of this fact: digital meters are Big Brother's ultimate spy tool!

Sincerely,

A. Peter and Liisa H. Lorenzen
